

FINANCIAL LITERACY

Debit Card and Credit Card

Chip & PIN

The card contains an embedded computer chip which is very difficult to copy or change. It provides protection against theft. Instead of swiping the card, the computer chip allows you to insert the card. You then enter a private Personal Identification Number (PIN).

This applies to both debit & credit cards.

Security Code

This is a private code for your credit card account and is used when shopping online.

This *only* applies to credit cards.
